**Toumey, J. W.** Foundations of Silviculture upon an Ecological Basis, volume I (book review), 258.

**Waggaman, W. H.,** assisted by Easterwood, H. W. Phosphoric Acid, Phosphates, and Phosphatic Fertilizers (book review) 258.

Waksman, S. A. *See* **Tenney, F. G.**

**Waksman, S. A.,** and Stevens, K. R. Contribution to the chemical composition of peat: V. The rôle of microörganisms in peat formation and decomposition, 315–340.

Whetzel, H. H. *See* **Kunkel, L. O.,** et al.

**Wilson, B. D.** Extraction of adsorbed cations from soil by electrodialysis, 411–421.

# SUBJECT INDEX

Adsorption, negative, by soil colloids, 180
Agriculture (Ackerbaulehre), a book review, 259
Alfalfa—
  decomposition of, 15
  nodule bacteria of, 249, 441.
Alkali soils—
  microflora of leached, 341–346
  synthetic, 341
Aluminum—
  absorption of, by soils saturated with hydrogen or calcium, 417
  extraction of, by electrodialysis, 413, 416
Ammonia, oxidation of, 131
Ammonium—
  phosphate for rice, 88
  sulfate—
    effect on nitrate changes in fertile soil, 449
    for rice, 88
Ammonification in alkali soils, 342
Bacteria—*see* also Microorganisms
  nodule—
    as affected by colloid addition to medium, 444
    fermentation of glucose and xylose by, 249–256
    literature review, 436
    nitrogen fixation by, 433
  Rhizobium—
    fixation of nitrogen by, 445
    isolation of, by the use of bacteriostatic dyes, 305
    japonicum, fermentation of sugars by, 252, 255
    leguminosarum, fermentation of sugars by, 251, 254
    meliloti, fermentation of sugars by, 252, 255
    trifolii, fermentation of sugars by, 251, 254
Bacteriological equivalents, a Dictionary of, book review, 257
Bacteriostatic dyes, use of, in isolating Rhiz. leguminosarum, 305–313
Barley, sewage sludge as fertilizer for, 425
Base exchange in soil colloids, 241
Beans, nodule bacteria of, experiments with, 440
Beets, sewage sludge as fertilizer for, 425
Bentonite—
  cataphoresis and flocculation of, 374
  electrodialyzed, behavior of, 207
  gel, distribution of ions in, 192
Blood meal for rice, 88
Botany, a book review, 259
Braunerde, discussion on, 177
Calcium—
  cyanamide for rice, 88
  exchangeable—
    colloid content and, 241
    method of determining, 144
  exchangeable, relation to—
    absorbed, 289
    yields, 166
  in peas, 15
  nitrate for rice, 88
  relation to nodulation of soybeans on acid and neutral soils, 261–279
  replaceable, extraction of, by electrodialysis, 413
Carbon—
  dioxide—
    apparatus for determining, 226, 229
    method for the determination of, 225–233
  method of determining total, 225
  nitrogen ratio in plants at various growth stages, 354
Cataphoresis, phenomenon of, in soil colloids, 373
Cellulose—
  decomposition by organisms from alkali soils, 342
  nitrogen ratio to, in plants at various growth stages, 363
Chemistry in Medicine, a book review, 259
Citric acid, decomposition of, by soil, 281
Clover, nodule bacteria of, 249, 441

Colloidal behavior, the laws of soil, 179–220, 373–409
Colloids—*see* also Soil colloids
activity of, 390
adsorption by, views on, 396
aggregation of, and flocculation, distinction between, 402
anion effect on swelling of, 200
as affected by—
acids, 384
bases and salts, 373
cataphoresis of soil, 373
cation, effect on composition of, 210
charge of, and flocculation, 405
charge on, present views, 396
cohesion of, 402
dehydration effects on, 205
dispersion of, 373
dissociation of, 389, 392, 394
Donnan equilibrium and, 182, 184, 376
flocculation of soil, 373
Hofmeister-ion series and, 183
hydration of, 397
ion distribution in, 192, 206
negative adsorption by, 180
plasticity, 215
potential difference in relation to viscosity and plasticity, 217
size, as affected by—
exchange capacity, 400
ion density and dispersion, 401
size, as related to surface density of ions, and force of cohesion, 404
valence, effect on behavior of, 185, 199
viscosity of, 213
water vapor method for determining, 237
Corn—
sewage sludge as fertilizer for, 428
soil type and, adaptation, 109
stalks, decomposition of, 60
Cotton seed meal for rice, 88
Crop—
adaptation and soil type, 101–123
yields, relation of laboratory data to, 165
Crotalaria striata, composition of, 347
Dalea cultures, experiments with, 441
Dentrification—
nitrite formation due to, 99
nitrogen losses by, 96
process in rice culture, 92
Dextrins, analysis of plant, 349
Diastase activity in plants, 221
Donnan equilibrium and soil colloids, 182
Electrodialysis—
extraction of adsorbed cations by, 411–421
method, 411
Everglades, peat soils of Florida, 1–13
Fertilizers—
Examining and Judging, Feeds, Seeds and Soils (Die Untersuchung und Begutachtung von Düngemitteln, Futtermitteln, Saatwaren und Bodenproben), a book review, 259
Handbook of, a book review, 257
leunasalpeter for rice, 88
nitrogenous, availability of, to rice, 85–100
sewage sludge as, 423–432
Field-Crop Enterprises, Including Soil Management, a book review, 259
Flocculation—
charge and, 405
of soil colloids, laws governing, 373
Glucose, fermentation of, by nodule bacteria, 249, 442
Grass, sewage sludge as top dressing for, 427
Hemicellulose, analysis of plant, 350
Hofmeister ion series and soil colloids, 183
Hydrometer method for determining ultimate soil structure, 27
Lignin, analysis of plant, 350
Lime—
effect on exchangeable calcium in the profile, 159
requirement, as affected by lime additions, 159
requirement, methods—
Hopkins, 143
Hutchinson-Maclenna, 143
Lysimeter data on absorption versus data obtained by the Hissink method, 294
Magnesium—
exchangeable—
determination of, 144
extraction of, by electrodialysis, 413
relation to absorbed, 289
in peas, 15
Microorganisms—
alkali soils, 341
number of in at different depths of peat, 322
rôle of, in peat formation and decomposition, 315, 326
Microscopic Technique, Handbook of, 258
Nitrates—*see* also Nitrogen nitrate
as affected by—
ammonium sulfate, 449

anaerobic conditions, 92
sodium nitrate, 449
formation under anaerobic conditions, 92
leaching from soils, explanation, 198
Nitrification studies on Crotalaria striata, 347–371
Nitrite—
coccus form of, organism, 134
oxidation of, 131
oxidizing organism, isolation of, 125–136
rod form of, organism, 134
Nitrites, formation of, due to denitrification, 99
Nitrogen—
ammonia—
as affected by anaerobic conditions, 94
in rice culture, 93
fixation—
alkali soil organisms and, 343
root nodule bacteria of the leguminosae and, 433–447
forms of extracted, in plants, 351
losses of, by denitrification, 96
nitrate—*see* also Nitrates
accumulation of, in soils, 356, 364, 450
in rice culture, 91
relation to nodule bacteria, 443
organic, as affected by anaerobic conditions, 95
Nodule bacteria of leguminosae, nitrogen fixation by, 433; *see* also Bacteria nodule.
Oak leaves, decomposition of, 70
Organic—
matter—
composition and decomposition of natural, in the soil, 55–84
nature of decomposition, 55
nitrogen, as affected by anaerobic conditions, 95
Organisms, nitrite oxidizing, method of isolation, 126
Paleopedology or Paleoedaphology, a discussion, 46
Pastures, Minerals in and Their Relation to Animal Nutrition, a book review, 258
Pea, nodule bacteria of, 249
Peat—
contribution to the chemical composition of, 315–340
microorganisms, rôle of, in formation and decomposition of, 315
soils of Florida everglades, 1–13
Phosphate—
effect on diastase activity in soils, 221
Phosphoric Acid, and Phosphatic Fertilizers, a book review, 258
retention of, by soil colloids, 243
Phosphorus, extraction of soil, with citric acid, 284
Plant—
analysis, methods of, 348
influence on nitrate accumulation in soil, 453
juices of pea, 19
leaves of peas, calcium and magnesium content of, 19–23
material, proximate composition, 59
Pathology and Physiology in Relation to Man, a book review, 257
Plants—
composition of, at various growth stages, 352
diastase activity in, 221–223
pea, calcium and magnesium contents of, 15–26
Plasticity in bentonite colloid, 215
Potassium, exchangeable, extraction of, by electrodialysis, 413
Potato, soil type and, yields, 103
Proteins, dissociation of, 394
Reclamation, The Economics of Land in U. S. A., a book review, 258
Rhizobium—*see* Bacteria rhizobium
Rice, nitrogenous fertilizers availability to, 85
Rye straw, decomposition of, 66
Sewage—
analysis of, sludge, 424
fertilizer value of, 423
Silica-sesquioxide ratio, relation to $PO_4$ retention, 245
Silviculture—
Foundations of, upon an Ecological Basis, a book review, 258
Practice of, a book review, 258
Sodium nitrate—
effect on nitrate changes in a fertile soil, 449–455
for rice, 88
Soil—
acidity—
distribution of, in Illinois soils, 137–178
methods of measuring, discussion, 152
analysis methods used on some Illinois soils, 142

bases—
calcium and magnesium, adsorbed and exchangeable, 289–304
distribution of, in Illinois soils, 137–178
"Braunerde," discussion, 177
buried, discussion on, 46
carbon-dioxide, apparatus and method for the determination of, 225–233; *see* also Carbon dioxide
cations, extraction of adsorbed, by electrodialysis, 411–421
Characteristics, a book review, 257
citric acid decomposition by, 281–287
colloidal—
behavior, laws of, 179–220, 373–409
properties of, 235–247
colloids—
adsorption, negative, by, 180
anion retention by, 242
base exchange in, 241
composition of, 238
Donnan equilibrium, application to, 182, 184
effect on nodule bacteria, 444
Hofmeister ion series and, 183
isolation of, 236
phosphate retention by, 243
positive and negative, 384, 387
properties of, 236
stability factors of, 389
color, discussion, 475
concretions and intrusions, discussion, 476
cropped with oats, influence on nitrate leachings, 452
definition of, 45
fallow, nitrates leached from, 452
horizons, discussion, 472
media, phosphate in affecting diastase activity in, 221
morphology, 39–54
morphology features—
color, 475
concretions, 476
constitution, 471
depth of profile, 473
habitus of profile, 472
structure, 475
texture of soil material, 475
nitrates, *see* Nitrate, Nitrates
profile—
methods used in the, survey, 469
sampling the, 477
studies, 39–54, 137–178, 469–479
types, 474
Russian school of, science, 41
science—
as an independent science, 39
Handbook of (Handbuch der Bodenlehre), a book review, 260
meetings at Danzig, 177
slaking of, 31
solution—
as affected by growth of peas, 15
calcium and magnesium in, as affected by growth of peas, 15
structure—
as affected by drying and wetting, 35
discussion on, 27, 475
synthetic alkali, 341
temperature—
changes at Davis, California, 457–468
methods of obtaining, 466
texture—
as affected by drying and wetting, 35
discussion on, 475
type—
and crop adaptation, 101–123
effect on calcium and magnesium content of pea plants, 15
volume-weight, 477
Soils—
acid, relation to nodulation of soybeans, 261–279
alkali, *see* Alkali
buffer action of, 143, 146
everglades peat, chemical composition, 1–13
hydrogen-ion concentration, as affected by—
citric acid treatment for P extraction, 284
depth in the profile, 146
growth of peas, 15
morphological features of, 471
neutral, relation to nodulation of soybeans, 261–279
structure of, 27–37
Soybean—
diastase activity of, 222
nodule bacteria of, 249, 440
nodulation of, in acid and neutral soils, 261
Starches, analysis of plant, 349
Sugars, analysis of plant, 349
Urea—
decomposition of, by alkali soil organisms, 342
for rice, 88
Viscosity of bentonite suspensions, 213
Volume weight sampling of soils, 477
Xylose, fermentation of, by nodule bacteria, 249
